Mapa Tacheometrica. Nicolae Popa, Mihai Popa (Romania) Mapa Tacheometrica. Issuing and processing Certificates of Origin and Customs Documents. Protect and authenticate your digital documents. Dipl. Eng., MIR, PhD and IT Master. 2016, 2018. A post-doctoral fellow was recently employed at our institution for three years. While a fellow, he worked in several research groups and in teaching in the College of Graduate Studies. The following are a few comments and observations about the work environment that he had to cope with, and about his overall performance: (1) The atmosphere of the various labs is good, but can be hectic. (2) The fellow was not very well known by his superiors and coworkers. He was hired by one of the directors of the institution. (3) He appears to be a self-disciplined, careful worker. (4) He has strong interpersonal skills, and cooperates well with other people, although a bit rigid in his ways. (5) He is a competent and well trained researcher. (6) He was expected to do the normal duties of a post-doctoral fellow (i.e., library searching, preparation of written work, conferences), but was not allowed to run experiments or participate in the work of other labs. (7) He had not been very active in presenting his work in previous years. (8) He was not involved in ongoing research programs; in this sense he worked essentially in a "clean-slate" situation. (9) He had an apparent interest in nuclear medicine. (10) He has a spouse and a child. (11) The career trajectory of the fellow was not clear to his supervisor, despite the fact that the fellow had had prior experience, was a good researcher, and was very interested in a research career. He made little progress in the program, despite the fact that he was one of the more productive young researchers in the department, and his supervisor did not seem to know what to do to help him. (12) He had many opportunities to develop his expertise and knowledge in the areas of pharmacology, biochemistry, physiology, and biology, but turned them all down for the purpose of continuing to develop his research skills. He took full advantage of the rich research environment of the College of Graduate Studies, however, and became well known among his colleagues, his peers, and his supervisees for his academic potential.
